

**Harvard T.H. Chan School of Public Health
Search for Assistant/Associate Professor
Department of Molecular Metabolism**

The Department of Molecular Metabolism (MET) (formerly Department of Genetics and Complex Diseases) at the Harvard T.H. Chan School of Public Health invites applications for the level of assistant or associate professor. **The shared interest of MET faculty is to explore metabolic biology to determine the basic mechanisms underlying the most important, non-communicable diseases affecting human health, including metabolic diseases, cancer, and neurodegeneration.**

The successful applicant will hold a PhD and/or MD degree and will have a record of outstanding productivity in an area that complements the existing research and training goals of the department. The candidate should possess the ability to work collaboratively with other scientists and the scholarly qualities required to mentor the diverse population of doctoral students in the PhD Program in Biological Sciences in Public Health within Harvard's Graduate School of Arts and Sciences. A generous start-up package and state-of-the-art research facilities will be available.

The Department of Molecular Metabolism offers a supportive and vibrant scientific community that values building a diverse faculty body. The Department Chair is committed to junior faculty success and will work closely with the hired candidate to develop a mentorship plan. Additionally, the Offices of Faculty Affairs, Research Strategy and Development, and Research Administration, together with mentors and academic departments, work in partnership to provide an individualized research development support system for each new tenure-track faculty member. Through this coordinated effort, faculty establish strong relationships with key administrative departments, receive support and guidance to navigate the funding landscape, and garner the tools and resources needed to succeed as members of the Harvard Chan School research community.
